SL25 Flood Barrier
Powered by IBS

River Severn, Bewdley
IBS flood wall protecting people, homes and businesses since 2006.

For more than two decades, we have been supporting our customers worldwide in the area of flood control with our highly reliable and flexible complete systems. As market leader for flood protection systems, we are committed to the continuous further development of future flood defence concepts. Our global network includes government organisations, internationally operating design consultants, contractors, suppliers, service units and local representatives, which distinguishes us as a company with a multinational footprint.

Our top priority is the satisfaction of our customers, to whom we convey a high degree of safety through the comprehensive knowledge of our experts.

Now, meet SL25, the latest development in lightweight flood barriers from IBS.

Our expertise in flood protection

Our flood protection walls have been saving lives since 1994. Whether for our flood protection systems using stop logs or glass, mobile flood defence for specific sites, slide-gate systems or stop log closures: over the last 20 years IBS Technics has become internationally known in markets worldwide for its disaster prevention and water supply product groups. Customers throughout the world - from Great Britain, France to Hungary, from Thailand through Saudi Arabia to the United States - trust in the high quality, precision and sustainability of our mobile flood defence systems and in their adaptability to every situation. Not only do our products comply with all common quality standards - we also set new benchmarks. Over the last twenty years we have successfully completed more than 4,000 projects.
